- HOW IT CHANGES
- Each lift starts at the low end of its set range. Two sessions in a row at the top of the range, or one rep short of it, add a set, up to its cap. A session below the range takes a set off.
 - Two sessions in a row with 5 reps on every set at the same weight, and the weight goes up: 5 lb on upper-body lifts, 10 lb on lower-body lifts. A session at 0 reps, or three in a row with fewer reps each time, brings it back down.
 - Easy and long sessions change length from week to week. Hard sessions change workout from week to week. Paces and watts follow your threshold and FTP.

”—” means nothing is logged yet for that lift. Start at a weight that leaves the stated reps in reserve.

Run paces come from your threshold pace.

Ride watts come from your FTP (functional threshold power, the power you can hold for about an hour).

Maximum effort = heavy sets. Dynamic effort = fast sets. Skill = practice sets. Hypertrophy = muscle-building sets.
